

THE USE OF MODERN INNOVATIVE TECHNOLOGIES IN FOREIGN LANGUAGE TEACHING AND ITS EFFECTIVENESS

Shirinqulova Sitora Muzaffar qizi

Student of SamSIFL

Annotation: In the article approaches of effective use of innovative technologies in the process of teaching a foreign language, their influence on improving the quality of students' knowledge, ways of effective introduction and approbation of this aspect through non-traditional forms of education are considered.

Key words: Innovative technologies, effectiveness, computer, education, science, internet,

In today's fast-paced world, science and technology are growing rapidly. Development in every field is moving forward. In particular, great changes are taking place in science. Delivering each subject to students using new innovative pedagogical technologies is one of the main requirements of today's education. Especially after the adoption of the Resolution of the First President of the Republic of Uzbekistan Islam Abduganievich Karimov dated December 13, 2012 No PQ 1875, the attention to the teaching and learning of foreign languages in our country has increased[1]. Today a new stage, a new era in foreign language teaching has begun. A new stage, a new era in the teaching of foreign languages has begun in our country. The use of advanced pedagogical technologies, interactive, innovative methods, communicative media is required in the teaching of foreign language lessons. New methods and requirements for foreign language teaching in the country have been developed in accordance with the Recommendations of the European Framework for Assessment of Knowledge and Skills of Foreign Language Teachers (CEFR). According to him, textbooks have been created for students of secondary schools and vocational colleges. In accordance with these requirements, classrooms are equipped with stands and new information and communication technologies. The demand for learning a foreign language is growing day by day. Foreign language science is divided into four aspects (reading, writing, listening comprehension, and speaking), each of which provides specific concepts and skills. Educational technology is the effective use of modern information technology in the educational process. It also aims to improve the quality and effectiveness of education through the introduction of modern innovative technologies in the educational process. In particular, there are several advantages to using such information and communication technologies in learning a foreign language. The role of modern technology in language learning and teaching is invaluable. The use of technology is useful in every aspect of learning a foreign language (reading, writing, listening and speaking). For example, to listen and understand, of course, it is impossible to do this process without a computer, player, CD. Listening is one of the most important parts of language learning. This requires the student to pay attention to the speaker's pronunciation, grammatical rules, vocabulary, and meanings at the same time. An important factor in the use of modern technologies in education is the ability of students to know and use information and communication technologies. Teaching and learning a foreign language using modern technology is one of the most effective ways. In this process, including:

- when using computers, the student can watch and hear videos, demonstrations, dialogues, movies or cartoons in a foreign language;

- It is possible to listen and watch radio broadcasts in foreign languages and TV programs;

- use of tape recorders and cassettes, which are more traditional methods; - CD players are available.

The use of these tools will make the process of learning a foreign language more interesting and effective for students[2].

One of the most effective ways to improve the process learning foreign languages is the use of computer and Internet technologies in the education system. The computer-information model of education is a kind of transitional phase from a system of traditional teaching methods foreign languages to a modern system of open education Information Society. Now not only e-technology, e-learning concepts is less reflected in society but also in education. Electronics all over the world the creation and use of information educational resources has become popular. This is because of the fact that working with such data is much different than working with paper data how many advantages:

1. Quickly find the right part of all the information;
2. Quickly edit and update as needed;
3. Fast delivery to another destination via the Internet;
4. Creating an electronic library.

E-learning resources are divided into several types:

1. A simple electronic version on a computer;
2. Electronic textbook;
3. Electronic educational-methodical complex.

An e-textbook has a unique name due to its nature, i.e.

e-textbook, e-manual, e-book, e-program, etc.

All this, of course, is to improve the quality of education and the paper in it rather than a tool to help create an electronic digital database

is calculated. This is why the e-textbooks listed above are so convenient

to save time and facilitate the delivery of data; visual in the formation of the skill and the emergence of the concept is to provide support [3, 41]. In the national training program "Continuity of the educational process with new pedagogical technologies." It is one of the most serious tasks to be performed in the second and treatment stages along with. As President Islam Karimov noted, "Democratic values in the minds of the younger generation prepared to perform, in short, this model has its own in life to have his own views and purpose in thought, mature and at every level aimed to manage an independent-minded individual "[4, 98]. Students' independent learning based on information technology includes: working with electronic textbooks, watching video collections doing, listening to audiocassettes, working on computer simulators, computer testing, etc. [5, 34]. As we have seen, each innovative technology has its own set of advantages. In all such methods, work in the teacher, the implementation of active action in the learning process of the student [6].

In conclusion, the use of computer technologies in teaching and learning foreign languages gives better results of the learning and teaching as well. Computers and software programs can help English language learners develop vocabulary skills and broaden knowledge.
